

Innopon-Text-CL washing detergent
(with disinfecting and whitening effect)

Conditions of application - concentration: 1.4-2.0% (for textile articles); working time: 15-20 min.; temperature: 60-90°C.

Areas and methods of usage: the product is designed for professional use. It is a washing detergent for treating prewashed or soaked textile articles (see: Innopon-Text-EL prewasher). We recommend it to various communal, industrial, medical and social laundries, spas, daycentres and other public institutes for performing the main washing procedure in a hygienic way. As a detergent of chlorine content, it is not recommended for handling colour sensitive clothes; nor is it suitable for handling wool or silk articles. Its application is primarily suggested for whitening various clothes and washing ones made of cotton. It depends on the contamination and the rigidity of water whether you should apply the minimum or the maximum concentration. Dissolve the detergent of the appropriate quantity in water and wash the soaked or prewashed article by this solution for 15-20 minutes at the highest possible temperature allowed according to its material (60°C at least). It should be followed by rinsing once with warm water and more times with cold water using the preferred rinser or neutraliser.

EU hazard symbol:

Warning: hazard

Flammability: not flammable

Safety recommendations: use the preparation exclusively for its function in accordance with general labour hygienic and labour safety instructions.

H302 - Harmful if swallowed.

H314 - Causes severe skin burns and eye damage.
